

2022 ThreeJS 001

- Set-up part 1 // new project, node install

!Tips n Links

※ learn ThreeJS, WebGL, typescript // ready ~> VSCode, Git, NodeJS, typescript

※ typescript: `npm install -g typescript` / 확인: `git --version, node -v, npm -v, tsc -v`(오류 시 `tsc.cmd -v`)

※ ThreeJS <https://threejs.org/>

※ sbcode <https://sbcode.net/threejs/create-threejs-project/>

※ 유데미 강좌 <https://www.udemy.com/course/threejs-tutorials/> ※ 다른 강의 <https://threejs-journey.com/>

Typescript

javascript+IntelliSense features (인텔리센스, 지능형코드완성, 기능 집합)

will use TS => to generate JS suitable for webpack to bundle codes into a single file

TS 새로고침: F1, TypeScript: Restart TS server

ThreeJS

※ 프로젝트 만들기:

node> three

@type/three

네이티브 WebGL을 최적화하고 컨트롤을 제공하는 라이브러리 // three.min.js 연결

`mkdir 플젝폴더 > cd 폴더 > dir/ls > ①npm init (package.json 생성) > code .`

`②npm install three --save-dev => json에 devDependencies에 추가`

`③mkdirs dist > client + server ④dist> client에 index.html 만들기1)`

`⑤mkdirs src > client + server ⑥src> client에 client.ts2) + tsconfig.json3) 만들기`

`⑦npm install @types/three --save-dev`

<https://sbcode.net/threejs/create-threejs-project/>

<< 코드복사

<https://sbcode.net/threejs/add-initial-scripts/>

1)./dist/client/index.html 2)./src/client/tsconfig.json 3)./src/client/client.ts

1)

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="utf-8" />
    <meta name="viewport"
      content="width=device-width,
      initial-scale=1" />
    <title>Three.js TypeScript Tutorials</title>
    <style>
      body {
        overflow: hidden;
        margin: 0px;
      }
    </style>
  </head>
  <body>
    <script type="module" src="bundle.js"></script>
  </body>
</html>
```

2)

```
{
  "compilerOptions": {
    "moduleResolution": "node", //how to find 라이브러리... node다~
    "strict": true //instantiate variable..? 추천사항
  },
  "include": ["**/*.ts"] <- TS compiler가 여기에 파일 넣을거=>client.ts
}
```

3)

```
import * as THREE from 'three'
const scene = new THREE.Scene()
const camera = new THREE.PerspectiveCamera(
  75,
  window.innerWidth / window.innerHeight,
  0.1,
  1000
)
camera.position.z = 2
const renderer = new THREE.WebGLRenderer()
renderer.setSize(window.innerWidth, window.innerHeight)
document.body.appendChild(renderer.domElement)
const geometry = new THREE.BoxGeometry()
const material = new THREE.MeshBasicMaterial({
  color: 0x00ff00,
  wireframe: true,
})
const cube = new THREE.Mesh(geometry, material)
scene.add(cube)
window.addEventListener('resize', onWindowResize, false)
function onWindowResize() {
  camera.aspect = window.innerWidth / window.innerHeight
  camera.updateProjectionMatrix()
  renderer.setSize(window.innerWidth, window.innerHeight)
  render()
}
function animate() {
  requestAnimationFrame(animate)
  cube.rotation.x += 0.01
  cube.rotation.y += 0.01
  render()
}
function render() {
  renderer.render(scene, camera)
}
animate()
```
